

Averland[®] FC

nematicide

Easy-to-use nematode protection with an excellent safety profile and proven ROI

THE AVERLAND[®] FC DIFFERENCE

- Provides broad-spectrum activity in the root zone to protect the growing crop.
- Won't gum up lines and nozzles resulting in increased operational efficiency.
- The only liquid abamectin product labeled in-furrow on cotton.
- Can be mixed with in-furrow fertility or other crop inputs.
- Locally systemic with translaminar activity for in-season control across a broad range of pests.
- Apply with Viloprid[®] FC 1.7 to get early season thrips control.

A SAFER SOLUTION		
Toxicity Chart		
Product	Rat Acute Oral LD50	Toxicity Relative to Averland® FC
Averland® FC	165 mg/kg	-
AgLogic®	29.6 mg/kg	>5.5x's more toxic

Averland FC is an easy to handle, low use-rate liquid nematicide that boasts an excellent worker safety profile.

HERE'S WHAT CUSTOMERS ARE SAYING

“You’re talking about a \$10/acre application that’s getting pretty good results on root-knot nematodes. You’re definitely getting a benefit of the savings and good activity.”

Chris Martin, Grower - Hawkinsville, GA

“Trouble free. I mean it’s just smooth. Goes right in there. It’s compatible and it flows. We didn’t have any issues in the mixing or application process.”

Jeffery Lee, Grower - Benson, NC

EXCELLENT ACTIVITY ON COTTON NEMATODES

Averland® FC + Viloprid® FC 1.7

Velum® Total

When applied in-furrow, Averland FC and Viloprid FC 1.7, protect the whole plant from a wide range of pests, including nematodes and thrips, allowing the crop to grow quicker and fuller.

2021. Hawkinsville, GA.

AVERLAND® FC IN-FURROW RATES

	AI (lb/gallon)	Application Rate (fluid oz/ac)
Cotton	0.7	3.5
Corn	0.7	4.0 to 6.0
